Comment:

To Dr. Michael Friedman, Regarding proposed changes in the labelling of food supplements, (DSHEA): 21 CFR, Part 101 Docket 98N-0044

It has just come to my attention that there is a possibility that the FDA will again try to limit my access to a free flow of information on food supplements and other substances and that the FDA is about to label many of lifes stages (such as pregnancy and menopause) as diseases so that remedies used during these times could be regulated making them expensive and limited in availability. I strongly oppose these ideas and am really tired of you bureaucrats deciding how to control my access to the information and the health care I desire. It is inappropriate for you to make these rulings and the idea should be abandoned. Please delete these parts of the regulations you are considering as they limit my access as a citizen to the information and choices that I believe are my right. Sincerely,
Maria Arrington RN
